

Tekaloid

Britain's most famous coach enamel

Tekaloid synthetic enamel is the modern counterpart of the original Tekaloid, the first coach enamel to be made in this country and still the most famous name in the transport finishing industry.

Suitable for application by brush, hot spray, cold spray, airless and electrostatic, on wood, metal, hardboard, fibreglass laminates, etc. Tekaloid is formulated specially for application to commercial vehicles of all types.

Tekaloid is supplied in a wide range of popular colours, including British Standard and commercial vehicle manufacturer's colours.

A Tekaloid finish is unsurpassed for permanency, brilliance, richness of colour and opacity it will withstand repeated cleaning and polishing with non-abrasive polishes in much the same way as a car finish.

Tekaloid is an extremely durable product and varnishing is not recommended, except in the case of certain colours such as reds crimsons, browns, and dark blues, where varnishing will ensure maximum gloss and colour retention.

Other products from the Tekaloid range:

Tekaloid Fleetbuild HB Primer

Tekaloid Fleetbuild primer is especially formulated to give high build films of a 'filling' primer suitable for overcoating with the majority of commercial vehicle paints in use today.

The selection of alkyd resins, anti-corrosion pigments and solvents produce a smooth dry film requiring only slight denibbing before proceeding. The resultant coating gives a high degree of corrosion protection and chip resistance.

Tekaloid Fleetbuild primer should be used where high film thicknesses are required or where a degree of 'filling in' is desirable. Typically a dry film thickness of 50 microns is obtained making the product particularly suitable for chassis and steel supports. It is however possible to apply Tekaloid Fleetbuild primer over existing paint work, GRP etc; after suitable preparation.

Tekaloid Fleet-Etch 2

Two pack pigmented etching primer with high build properties

Fleet-Etch 2 two pack Etch Primer has been developed using the latest pigment and resin technology to provide a high build base coating for substrates which traditionally have been difficult to achieve good adhesion upon.

Fleet-Etch 2 has been specially designed for application on to aluminium and zinc coated steel. Fleet-Etch 2 is also suitable for application on to substrates such as GRP and hot rolled steel where exceptional adhesion is required.

Tekaloid Fleetguard 2

Fleetguard 2 two pack finish is an isocyanate cured enamel that has been specially formulated on high solids technology to combine a fast set up time with exceptional build characteristics. Fleetguard 2 also confers excellent gloss and colour retention, durability and resistance to chemical attack.

Fleetguard 2 can be used for finishing an extensive range of light and heavy commercial vehicles, Passenger Transport vehicles, Rolling stock and Highway Equipment. On large surfaces where extended overspray absorption times are required, the use of Tekaloid Fleetguard 2 slow thinner reference TJ64 007 is recommended.

Tekaloid Fleetfast

Tekaloid Fleetfast Primer Undercoat is based on high quality air drying alkyd resins. It is formulated to provide a tough durable film. Fleetfast Primer Undercoat incorporates lead and chrome free anti corrosion pigments, which gives a high degree of protection.

Tekaloid Fleetfast Primer Undercoat is designed specifically for use under Fleetfast Enamel. It is also suitable for use under the full range of our Tekaloid Air Drying Enamel Paints.

Tekaloid RX Primer

Tekaloid RX Primer is a twin pack epoxy resin based primer which is cured by the addition of a Polyamide activator. The zinc phosphate pigmentation provides first class rust inhibiting high build protective coating.

Tekaloid RX Primer is specially formulated as a metal primer for use under Tekaloid RX Enamel. It also serves as an excellent primer for Tekaloid Fleetguard 2 Enamel Paint where particularly high build is required. Other Tekaloid products can also be applied over RX Primer. This product is
